
Native Instruments has announced the release of a pristine collection of 7 Kontakt Instruments featuring vintage, live recorded drums, chimes and percussion on 2 Spring reels. You can download it from NI's website here. These.1. Field of the Invention The present invention relates to a charged particle beam apparatus, a charged particle beam exposure method, and a computer-readable storage medium having a charged particle beam exposure program stored therein. 2. Related Art In the semiconductor industry, the continuous reduction of the design rules has been demanded with the recent development of the digital technology. The method for producing a semiconductor device has been changed from an exposure method using ultraviolet light to an exposure method using charged particle beams such as electron beams and ion beams. As is known, charged particle beam exposure is performed by scanning a mask with an electron beam or ion beam and exposing a wafer with a pattern created in the mask. As for the electron beam exposure, a serial electron beam exposure method is known that sequentially exposes a pattern in a stepwise manner by moving a mask or a wafer to irradiate an electron beam. On the other hand, as for the ion beam exposure, a block exposure method that exposes a pattern with a part of a mask irradiated with an ion beam and a step-and-repeat method that exposes a pattern at a higher speed than the serial electron beam exposure method are known. Specifically, the block exposure method divides a pattern into several blocks to expose the blocks sequentially one by one. After exposing a block, the mask is tilted or shifted to the next block to be exposed next. Alternatively, after a region where a block has been exposed is moved to the next pattern to be exposed, the block is irradiated with an electron beam or an ion beam. In the case of the block exposure method, the charged particle beam exposure can be performed at a rate close to that in the serial electron beam exposure method. An example of a charged particle beam exposure method using a mask having a plurality of blocks or a mask having a pattern divided into blocks as disclosed in Japanese Patent Application Publication No. 8-193310 will be described below."Lucy" Is a 'Very Beautiful and Groundbreaking' Film Larry Charles is all praise for "Lucy," the raunchy new comedy film in which the satirist, known for skewering politicians and corporations alike, plays a downtro
