Superhero movies are big business. Since 2000, when Dark Knight director Christopher Nolan released his bombastic film that starred Christian Bale in the lead role, the genre has been booming. Batman Begins gave us Caped Crusader/face-stomping beast with Michael Caine, the first of the 1960s Batman TV show. The Dark Knight (2008) saw the unlikely friendship of Batman and Harvey Dent (The Joker). The most recent instalment in the franchise, The Dark Knight Rises, has taken things to an even greater level. With the release of the final instalment of his Dark Knight trilogy, Batman (Christian Bale) gets to play out his last 'Kilroy was here' mission, as he faces off against The Joker (Heath Ledger) in the last showdown of the series. The Dark Knight Rises – whose title refers to Bane's (Tom Hardy) jailbreak of Gotham City – will most likely feature Bane attacking the city, forcing Batman to head underground (or whatever he chooses to do in this world, to keep up with the game). It is tempting to think this is the end of the Batman franchise, and while the story may be over, we'll be eager to see where Warner Bros. and director Christopher Nolan will take the character. missing out on a massive amount of character progression and a myriad of other well-woven plot lines. Superhero movies are also big business. The Dark Knight series, which has earned around \$1.5 billion at the box office, is firmly on the books of \$10-plus billion for Warner Bros. at the time of writing. Some of the other superhero movies that have made a bit of cash include Spider-Man 2, (2005), a few Captain America films, X-Men and The Dark Knight (2008). The film Avatar (2009), which made \$3.8 billion at the box office in ten days, was the most successful film of all time, until Marvel's Iron Man 3 went
