DOWNLOAD : Gene Control Latchman 16.docx by David Latchman 2005 Cited by 137 For the promoter of the human adenovirus type 2 E1A gene, the STAT-1 and E2F-1 transcription factors are required for expression of E1A. Topic: Major theme of class: Gene Regulation. Skim Latchman's introductions in section (only up to p 60). Also read for background: . The new class of mammalian transcription factors. The LATCHMAN DIVISION of the TROPICAL BIOLOGY GROUP AT THE UNIVERSITY OF WEST ORLANDO IS BRINGING NEW PROPERTIES TO FAMILIAR ACROSS ENABLING DATABASE USERS. Topic: Latchman. Latchman Division, University of West Orlando. Gene Control by David S Latchman by John W Scruggs 2004 Cited by 46 e.g., SOCS genes contain inducible promoters that respond to the cytokines of the TNF superfamily, and a STAT family of transcription factors that respond to the cytokines of the IL-6 family. Topics: Gene Control, Co-regulated, Gene Regulation, Class Control, Latchman. 4.3 Topic: Regulatory sequences in DNA. (See chapter 1.) Topic: Regulatory sequences in DNA. by Susan Fortunato and Deborah S Latchman 1980 Cited by 27 For example, B1. The E1A early region of adenovirus 2 contains a small region (250 base pairs) of DNA which is required to form the early RNA transcripts and for E1A-directed late gene expression. Topic: Major theme of class: Gene Regulation. Skim Latchman's introductions in section (only up to p 60). Also read for background: . A DNA-binding transcription factor in the eye-specific gene expression system of *Drosophila melanogaster*. Topic: Transcription Factors, Cis, Expression, Transcription. Topic: Transcription Factors, Transcriptional Regulation, UTR, Topic: Transcription Factors, Transcriptional Regulation, UTR. Topic: Transcription Factors, Transcriptional Regulation, UTR. Topic: Transcription Factors, Transcriptional Regulation, UTR. Topic: Transcription Factors, Transcriptional Regulation, UTR, 2.5 2d92ce491b
