Q: how to save image in database from url in android? I want to save image in database on click of save button I am getting the image path from web url and I am getting the path as "" I want to save this path in database as longblob column on click of save button how can I do this? A: You can use the Bitmap class to save the image and then insert it into your database. Here is the code: `Bitmap b = BitmapFactory.decodeResource(context.getResources(),R.drawable.myimage);`
`ByteArrayOutputStream bytes = new ByteArrayOutputStream();`
`b.compress(Bitmap.CompressFormat.PNG, 100, bytes);`
`String image_path = MediaStore.Images.Media.insertImage(getContentResolver(), b, "Title", null);` Or, if you want to save it directly from the URL: `InputStream is = (InputStream) new URL(url).getContent();` try { `Bitmap b =`
`BitmapFactory.decodeStream(is);` `ByteArray 2d92ce491b`
