Tiff FixIT is an easy to use Windows application for editing and appending multiple pages to TIFF files found on your computer. In just a few seconds, you can change the order of pages, introduce new pages and create a cover. It allows you to edit the margin, crop, resize and rotate pages and create annotations, watermarks, redactions and even deskew. Flipbook for windows allows you to create photo flip books on your computer. When the application is run, a tabbed browser interface will pop up which allows you to browse your photo collection and select images to be included in the flipbook. The layout for the selected images are then set in the program and the flipbook will be displayed as a web page that you can view and download. Working with Presentations is hard enough without end users asking "What happened to the previous slide?" This is the answer. The ability to create a presentation without having to do as much work as you normally would. ? The ability to use numbered and bullet point lists in PowerPoint. ? The ability to build charts and graphs and be able to preview them. ? The ability to make a PowerPoint presentation without the interface crashing. ? The ability to create PDF files from Presentations as well as exporting the entire presentation as a PDF file. ? The ability to work with multiple computers as well as multiple PowerPoint versions on multiple computers. ? The ability to work with multiple people on a presentation simultaneously. ? The ability to have user-defined background colors for each slide. ? The ability to import presentations from other formats. ? The ability to capture screen shots to be used for your next presentation. ? The ability to import that data into any Office product. ? The ability to play a Presentation and move around in it. ?
