Acronym for Autodesk AutoCAD History of AutoCAD Listed below is a brief history of Autodesk, AutoCAD, and other Autodesk products: Autodesk Incorporated History In 1975, a group of computer graphics experts began work on software to help a small group of architects develop architectural plans, plans, and drawings. This group was led by Don Hruska, who organized the team in Palo Alto, California. These software engineers created AutoCAD as the first of many CAD programs developed by Autodesk. The last of the seven founders of Autodesk Inc. joined the company in 1980 and worked as a key engineer and a systems designer. He was instrumental in the development of the first Autodesk program, AutoCAD. In 1981, Autodesk Inc. was sold to Davies and Associates of Seattle, WA. In 1982, Autodesk Inc. became a publicly traded company. In 1986, The Davies and Associates Group became Autodesk Inc., a publicly traded company. Autodesk History In 1980, Autodesk was founded in the United States and launched a time-sharing system called the AutoDesk product. The time-sharing system of AutoDesk ran on a small group of computers and offered the users their own computer workstations. In 1986, Autodesk's workstations were integrated to form the now-famous AutoDesk product. This included drawing software, integrated viewing, and batch file processing. The Autodesk product is used to develop architectural plans, designs, and construction drawings. The development of AutoCAD and other products are able to function and record drawings on standard drafting programs. In 1989, Autodesk Inc. was also founded in Canada and introduced the first version of AutoCAD. In 1990, Autodesk Inc. was also founded in Israel and introduced the second version of AutoCAD. In 1992, Autodesk Inc. was founded in France and introduced the third version of AutoCAD. In 1994, Autodesk Inc. was founded in the United Kingdom and introduced the fourth version of AutoCAD. In 1995, Autodesk Inc. was founded in South Korea and introduced the fifth version of AutoCAD. In 1997, Autodesk Inc. was founded in Japan and introduced the sixth version of AutoCAD.

Native Support for AutoCAD Drawing Exchange Format. AutoCAD r2010 includes a DXF importer. CAD Automation API is another API that allows programmatic access to all Autodesk® programs. File formats The native file format for AutoCAD is the Drawings Exchange Format (DXF). DXF files may be loaded into AutoCAD as part of a load action (Import DXF) or may be loaded in any of the drawing modes (Dwg, Dgn, Dtx, Dxf, Mdx, etc.). DXF files have standard names for most types of drawings. DXF files are often used for transfer of drawings from one CAD program to another. This is often done with EDC's from building information modeling software or EDA CAD tools, where the graphics are created using a common format for this purpose. DXF files are also commonly used for raster image editing (photoshop, illustrator, etc.) and graphics (graphicsmagick, etc.). DWG and DXF files have standard file formats, although some programs, such as DigitizeIt, might use their own file formats. Adobe Illustrator files are often used in AutoCAD, however this is not always the case. Export formats DXF files can be exported from any drawing mode. They may also be exported as PDF. PDF files may be converted to PostScript using the command prompt: pdf2ps. AutoCAD also supports PDF/X as well as native PDF-A and PDF/A-1B formats. PDF/X is a variant of PDF that also includes support for Extensible Metadata Platform (XMP), which allows users to store additional information about a file. PDF/A and PDF/A-1B are newer versions of PDF. PDF/A includes support for embedded XMP. PDF/A-1B includes additional protection for the use of digital signatures, similar to PDF/A. AutoCAD also supports Portable Document Format (PDF) export files and open PDF files directly from Windows Explorer. Export feature in Autodesk® AutoCAD® 2015 software, provides the following set of features for exporting Autodesk® AutoCAD® drawings to the following formats: Native DXF format AutoCAD DGN format JPG, GIF, PNG, TIF, BMP, IFF, CGM, CR 5b5f913d15

Q: How to use Autofac in application project with web-site project? I have an application project (Core, UI, Infrastructure, WebAPI, etc.) and a website project (Web, Views, etc.) and everything in both is contained in its respective projects. I want to be able to configure the same thing in the website project to take advantage of code sharing. I'm using autofac 2.5.3. I tried registering an IServiceProvider like this: `builder.Register(context => { var container = (IUnityContainer)context.Kernel.Resolve(); return container.Resolve(); }) .InstancePerDependency();` But I have the following error: Type Parameter 't' has no generic arguments It's probably because I have already registered some stuff, but I don't understand how it works, how do I get my code sharing working, and how do I use autofac from both a web and application project? A: I figured it out. I had to register the service provider in the composition root. `builder.Register(context => { var container = (IUnityContainer)context.Kernel.Resolve(); return container.Resolve(); }) .InstancePerDependency();`
