Adobe offers excellent tutorials for all Photoshop versions for your convenience. Chapter 10 contains a list of the tutorials that are contained in Adobe's Creative Suite 2. In addition to the Photoshop tutorials, you can find software in print and online that focuses on teaching Photoshop in easy, interactive lessons. Adobe offers some great tutorial programs, and we recommend the following offerings: * Adobe PhotoShop Elements 9: \$99.99 (plus shipping costs) is designed to be used as an introduction to Photoshop. The program comes with excellent tutorials. It also includes several learning tools and is perfect to learn the basics of the program. * Adobe Photoshop Elements 8: \$119.99 (plus shipping costs) is similar to the previous version, but includes greater enhancements in the graphics capabilities. * Dummies Press Inc. (\$125 plus shipping costs) publishes a series of tutorials on Photoshop that are geared to some difficulty level. They're not as in-depth as the tutorials in this book, but they do give you an idea of how to use Photoshop with a specific topic. * Adobe Photoshop CS2: \$119.99 (plus shipping costs) includes the latest version of the program. ## Gathering a Good Photoshop Library With some good tutorials, you can become quite proficient in Photoshop very quickly. However, that doesn't mean you won't have to reference other Photoshop documents to achieve a specific task. Sometimes, you can perform similar tasks with images that have different file sizes or colorspaces. Creating a basic Photoshop library is quite simple. You can either save your Photoshop images to a folder on your computer or you can save them to a specific Photoshop drawing, which appears at the bottom of the image-editing window as shown in Figure 2-3. When you open the library, you can open and save these images, but more importantly, you can also work with layers of all of the images in the library. Figure 2-3 shows a library of two layers. The black-and-white layer, shown in the middle, has been resized using the Image Size dialog box; the foreground is 5 pixels; and the background is 10 pixels in size. The color layer in the lower-left corner of the drawing area has a size of 200 pixels. FIGURE 2-3: Resize and rotate layer-based images in the library. You can also open the Libraries panel on the right side of the Photoshop window, shown in Figure 2-4

Sunitinib-induced anaemia is associated with inhibition of erythropoietin and vascular endothelial growth factor expression and hypoxia-inducible factor-2alpha activation. Sunitinib, an oral multitargeted tyrosine kinase inhibitor, is the standard treatment of metastatic renal cell carcinoma. We previously reported that sunitinib increased intracellular oxygen levels in renal cell carcinoma cells, and that tumour cell hypoxia is a mechanism by which sunitinib exhibits antitumour activity. Whether sunitinib affects erythropoietin (Epo) and vascular endothelial growth factor (VEGF) expression and hypoxia-inducible factor (HIF)-2alpha activation in tumour cells was not known. To address this question, the expression of Epo and VEGF genes and proteins was evaluated in 11 renal cell carcinoma cell lines by reverse transcription-polymerase chain reaction and enzyme-linked immunosorbent assays, and intracellular pH by flow cytometry and 2', 7'-dichlorofluorescein diacetate. Sunitinib concentration-dependently reduced Epo and VEGF mRNA levels, secretion of both cytokines, and HIF-2alpha protein in all cell lines investigated. The reduction in Epo and VEGF expression was accompanied by a 2- to 6-fold increase in intracellular oxygen levels. Decreased Epo and VEGF expression was related to sunitinib-induced oxidative stress, as shown by inhibition of reactive oxygen species generation and prevention of sunitinib-induced cell death by N-acetyl-L-cysteine. The down-regulation of Epo and VEGF expression was also accompanied by the inhibition of hypoxia-inducible factor-2alpha degradation in renal cell carcinoma cells. An in vivo antitumour activity study was performed in nude mice bearing human renal cell carcinoma Caki-1 or ACHN xenografts. Treatment with sunitinib of Caki-1 xenograft-bearing nude mice resulted in growth inhibition and significant tumour hypoxia. Sunitinib administration reduced intracellular pH, reducing VEGF gene expression and VEGF secretion, and activated HIF-2alpha in Caki-1 cells. In ACHN xenograft-bearing nude mice, sunitinib also markedly
