TSB-1 Torrent (Activation Code) PC/Windows

This plugin has all the features of our TSB series but makes the tones sound livelier by adding more bass and more gain. The TSB-1 also has several new features that allows you to fully customize and take control of the results you get. TSB-1 is for use only with the Fender Stratocaster, Telecaster, and Mustang guitars (as shown in photo), by using this plugin along with the Sonicfire (MkII, Pro, Carbon, 3D, or Vintage) instrument, you will be able to customize your sound on the fly as you are recording, playing and saving your songs. TSB-1 settings include: The Gain knob sets the amount of gain used and adds the required amount of distortion to the signal path. This gives you the option of adding both gain and distortion to the signal path. The Bass knob sets the amount of low end distortion and frequencies played. This is a companion knob to the Bass and Gain settings. The High knob adjusts the amount of high end distortion and frequencies played. Again, this is a companion to the Gain and Bass settings. The Chorus knob adds chorus which is an effect on the high frequencies. The Clean boost/cut adds a boost or a cut to the high frequencies. A handy reverse effect is also available. You can use this to reverse the effects applied to the signal path with the gain, bass, or chug settings. The Filter knob will filter out any frequencies that are not available to the signal path and stops those frequencies from affecting the sound. The Fuzz knob controls the amount of distortion for the internal and external fx block. Again, this will control the amount of fuzz and distortion applied to the signal path. The Q control is the amount of the analog signal that goes to the amp block. It is the raw unit of the amount of signal that will go to the amp section. A powerful high pass filter is also available. The TSB-1 is designed for the G and C string notes and a conventional guitar setup and is not designed for single coil pickups or a pickup assembly. Fender Les Pauls are also not recommended because the Les Paul pickups will not register with the Sonicfire audio processor. Its possible to set the TSB-1 to run with the Fender single coil pickups and a Fender Stratocaster, Telecaster or Mustang guitar.
