Book Review: Protecting the Children Protecting the Children: The Evolutionary Biology of Human Good Behaviour and the Origins of Morality is a book by Richard Sosis and Avi Mandelbaum that explores how altruism and kindness evolved in the human species and how these behaviors affect us as individuals. Our review of the book is quite in-depth, so read on if you would like to learn more about how altruism evolved in the human species and how the authors explain it through the concept of social selection. Contents Protecting the Children explores social selection as a means to explain the evolution of human altruism and kindness. Social selection is any evolutionary scenario in which reproductive success is increased through the efforts of other members of the group, other individuals outside the immediate group. Our review of the book starts with the concept of social selection as presented in the book. After this, we discuss the evolutionary psychologists that contributed to the concepts and research covered in the book. The evolutionary biologists who contributed to the book's research are Richard D. Alexander, Steven Pinker, Paul Bloom and Stephen R. Kellogg. Readers who are familiar with evolutionary psychology should recognise Pinker as the author of "The Blank Slate", which is a famous book on evolutionary psychology. Protecting the Children is not the first book by Sosis and Mandelbaum to explore the concept of social selection, but it does contain more empirical research than previous books. Richard D. Alexander is well known for his research in the field of social selection. Among his many contributions, he made it his life's work to study the evolution of kinship (i.e. the dynamics of marriage, paternity and family roles) and how this affects altruism. This line of research is explored in the book's introduction. Steven Pinker is the author of "The Blank Slate", which is another work in the field of evolutionary psychology. It is a controversial book that challenged many of the long-held beliefs about human psychology and behaviour. Pinker's work on the evolution of altruism and kindness is examined in more detail in the book. Paul Bloom's work in the field of evolutionary psychology is discussed in the book. Stephen R. Kellogg is a well-known writer in the field of evolutionary psychology. A book that he published explores the concepts of group selection. Protecting the Children contains the first extensive review of Kellogg's book, so we

1. Field of the Invention The present invention relates to a digital color copier, facsimile apparatus, or similar image processing apparatus. 2. Discussion of the Background Conventionally, when a raster image is displayed, the density of gradation of an image or the shade of a color is modified in accordance with its position on a frame. FIG. 2 shows an example of the conventional art. Reference numeral 100 denotes a display screen, 101 denotes an image data area (in the form of a pixel), 101a denotes a pixel of interest, and 102 denotes a frame. If an original document is displayed on the display screen 100 of a raster image processing apparatus, a corresponding frame 102 is displayed on the display screen 100. Here, each of the pixels 101a of interest is located at a position marked by the frame 102 and is displayed in the same color as the frame 102. If a uniform color is to be applied to all the pixels of interest 101a located at a plurality of positions on the frame 102, the background of the display screen 100 must be colored uniformly. FIG. 3 shows another example of the conventional art. This method, which is used when it is desired to output a copy or facsimile document, employs a frame having a large frame size, in the form of a frame 102'. The original document is displayed on the display screen 100'. Each of the pixels 101'a of interest is marked by the frame 102' and is displayed in the same color as the frame 102'. As a result, the background of the display screen 100' is uniformly colored. This conventional method, however, cannot be used when a document, such as a patch to which an image is to be added, is to be output on the same frame. In case of a patch, the background of the frame is intentionally left blank and a patch is displayed as an overlay. As a result, it is difficult to color uniformly the background of the display screen. Friday, August 2, 2010 Busy, but not too crazy. Well, my computer was acting up so I couldn't access my blog for a few days. Eventually it came back and I could access it, which was okay, except I had to re-install Windows. Then my husband became very ill at work...so I went to bed early. I am finally somewhat functional again and posting to the blog. So...I have been spending too much time at home,
