Hotel Flamingo All the major European countries are connected by air or rail to the European Union, especially via London and Brussels, and are all full members of the Schengen agreement. CVS Card Partners: CVS Card Partners: To activate your CVS Card at a store without an activation code, go to Account Information, Select the number 2 on the screen, and then select Activate a Card. Cost: \$10/year Availability: In-store/out-of-store. E-mail: Sign in to activate your account with us, so you can receive special offers and updates.1. Field of the Invention The present invention is directed to an apparatus for the production of at least two products from a continuous web. The apparatus includes a first converter for converting the continuous web into a pre-form, and into at least one first product, and a second converter for converting the pre-form into at least one second product. The first and second converters are provided with processing sections which form the continuous web into the pre-form and for cutting the pre-form, if necessary. The apparatus further includes at least one feeding and cutting device for the cutting process in which a cutting tool is guided over the pre-form which is being cut. 2. Description of the Related Art For the production of cigarette papers and cigarette filter rod sections, or for so-called soft-cut cigarette paper, different apparatuses for the production of the pre-form are known. For example, an apparatus is known which comprises a first processing section for the formation of a continuous web from a pre-form made of metal foil, and two second processing sections, which are coupled to each other by means of a shut-off device, and which are provided to separate the continuous web into pieces. The pieces of the continuous web are, in turn, cut. The feeding and cutting process is performed by a feeding and cutting device, which in this case is a so-called guillotine-cutting device. In the feeding and cutting process, the continuous web is initially fed in the form of a sheet material over two rollers between the first and second processing sections and is then guided in the desired path by deflecting rolls and is cut by a sharp knife-like cut-off edge. The cutting tool provided in the cut-off device is guided over the continuous web at a knife table which can be adjusted between a high and a lower position. This allows the continuous web to be cut into pieces d0c515b9f4
