You can create your own digital collages by using the Draw feature (drawing, painting, and line and shape creations) and other tools, as well as the PorterDuff setting that allows you to blend pictures or other images. You can also use some tools to fix problems with images you have created in other programs. After you open an image in Photoshop, the steps to create a new file are quite simple, and you can then make any edits that you need to do. You can't fully understand how to use Photoshop without understanding layers. Photoshop uses layers to group and organize different parts of an image. The tools that you use are stored on the layers, so they are all available to you, but only what is stored on that layer is available in the final image. Within a single layer, you can alter virtually any part of the image. You can stretch, shrink, remove, move, and duplicate pixels, or add shapes or lines to an image. Photoshop layers also enable you to move or copy a section of an image and insert it into another image or position it over the image's background. Before you use any of these tools, however, you have to know a few things about working with layers. It's how Photoshop allows you to move and edit pixels — so let's get into using Photoshop's layers. Defining a document Photoshop's layers are grouped together into a document. Most documents consist of several layers — they can easily have as many as 100 layers. A layer can be anything you want. For example, you could use layers to lay a tablecloth over a photo of you and your friends at a party. That's one layer, and that's where you would store the tablecloth, the party photo, and the text "April Fool's Party." Each layer is separate, and each can be adjusted, moved, or removed. Don't confuse layers with the picture you have selected. If you select a picture, that picture is the contents of the layer (Image Views) and the layer itself is flattened (see the later section "Sorting a bunch of stuff in Photoshop" for more on flattening layers). A lot of people get confused by this; however, layers are one of the most important features of Photoshop and the reason that you use layers is to make changes to parts of the image without making those changes to the entire image. Sometimes the icon of a layer just shows a square or a rectangle, but

Reddit has changed its policies on the sub-Reddits of r/atheism for the first time in over a decade. The atheist subreddit, r/atheism, had been banned in 2001, but r/atheism was reinstalled in 2010. The reinstatement lasted roughly five years, until its moderators finally removed the ban, writing "We're not going to ban r/atheism any more." This time, however, has been different. In an email to Redditor AmiableMadMacBeth, r/atheism moderator AmiMojo wrote: Reddit has been rolling out new tools to help us moderate the sub, and it turns out that they don't play well with us. So, we're going to be reverting r/atheism to "perma-banned," which means that it can only be accessed by users who have opted into the "Verified accounts only" moderation setting on Reddit. The new moderation settings restrict posts to users who are verified on Reddit, created an account on Reddit within the past year, and have previously posted in the subreddit that also posted at the time. "We're planning to keep this setting on all of our other subs when we're ready to get them back up," Mojo explained. "But just in case, we'll leave it on for a while, and any sub that gets us removed from this tier will get put back up with a static message explaining what happened, and why." Mojo went on to say that they remain open to having r/atheism removed from Reddit if it is ever on the receiving end of a case of "false positives." "That's why we're implementing this tactic now," he said. But not all users are appeased with the new policies. AMA bot DebatingAtheism, who is perhaps the sub's most active user, tweeted that the "verification policy is a big problem," adding that "the above is my username if you need to direct proof to someone." After several users expressed the same sentiment, Mojo replied "A whole lot of people seem to be pissed about the new verification policy, but those of you who are, know that you aren't being removed because you're 'angry,' we're removing you because we don't want to be managing you. Part of the reason for global protests is that real demonstrators know how bad economic conditions are in many countries, so the only hope is that they can force change at the national level before things get that much worse. Members of a modern-day underground railroad rescue migrants fleeing drought and extreme poverty in Ethiopia. At least 70 people were killed in an earthquake that struck an area near the Kenyan capital, Nairobi, on Monday, triggering a tsunami and warning to hundreds of thousands of people to evacuate the coastline. Many were killed as the fault beneath the Indian Ocean island had been showing evidence of movement in recent months. The volcano spewed ash and ejected rocks up to 600 metres into the air when it erupted in an area full of glaciers and hot springs, as well as three hot springs that may have been inside the volcano. The Anak Krakatau volcano is located between the islands of Java and Sumatra, about 125 kilometres south-east of the capital, Jakarta, and has been active in the past. There were no immediate reports of casualties in Jakarta or elsewhere. A flash flood warning was issued for the region and a tsunami warning was also issued for much of the Indian Ocean, including the Indian and Arabian coasts. Experts said the sea had receded from the coast by about 2.5 kilometres (1.4 miles) and the water level had continued to drop during the day. WATCH: Jupiter & The Sun, 15 Dec.2019. Thoughts: By the end of 2017, Jupiter had not yet reached its opposition with the Sun but had turned itself further away from the Sun. Now Jupiter and the Sun are in conjunction and about 0.5 degrees apart, forming a beautiful configuration. Jupiter is still rapidly descending into the Waning Crescent phase of its Cycle. This is not what we are seeing in the signs but we are seeing the acceleration of Jupiter's descent; the more it descends, the more the Moon's rotation speeds up, becomes more direct, and takes place during the Waning Crescent. Jupiter is about to cross the Gemini/Virgo sextile and will then cross
